## DETAILED ACTION

### ***Continued Examination Under 37 CFR 1.114***

➤ A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on December 23, 2002 has been entered.

### ***Claim Rejections - 35 USC § 102***

➤ The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

➤ Claims 43-44, 76 and 78 are rejected under 35 U.S.C. 102(b) as being anticipated by George et al. (US Patent No. 5,332,444).

➤ Regarding claims 43, 76 and 78, George et al. teach a method comprising: layering a first conductive material (see col. 7, lines 20-26), introducing a hexamethyldisilane material (see col. 4, lines 12-25); applying electromagnetic energy

(see col. 4, lines 34-47 and col. 5, lines 34-32), layering a second conductive material (see col. 7, lines 20-26).

Regarding claim 44, George et al. teach directing ultraviolet light toward to the material introduced to the first conductive material (see col. 4, lines 34-47 and col. 5, lines 34-32).

➤ Claims 43-44, 76 and 78 are rejected under 35 U.S.C. 102(e) as being anticipated by Park et al. (US Pat. No. 5,723,384) (this reference was cited by Applicant in paper No. 23).

Regarding claim 43, 76 and 78, Park et al. teach a method for fabricating a semiconductor device (see Fig. 15) comprising the steps of: layering a first conductive material (35a) (see Figs. 10-11), introducing diborane or B<sub>2</sub>H<sub>6</sub> material (see col. 4, lines 14-16); and layering a second conductive layer (39) (see Fig. 15).

Regarding claim 44, Park et al. teach directing ultraviolet light toward to the material introduced to the first conductive material (see col. 4, lines 3-19 and col. 5, lines 29-33).

### ***Response to Arguments***

➤ Applicant's arguments with respect to claims 43-44, 76 and 78 have been considered but are moot in view of the new ground(s) of rejection. With regards to the reference George et al., please note that the claimed carbon-silicon compound hexamethyldisilane has the chemical composition of [(CH<sub>3</sub>)<sub>3</sub>Si]<sub>2</sub>, which is the same

chemical composition known in the art for **HMDS**. Thus, George et al. still anticipate the claimed invention since George et al. teach the same claimed carbon-silicon compound of  $[(CH_3)_3Si]_2$ .
